B. FOLLOW THE PHASES IN CONDUCTING AN EARTHQUAKE DRILL

1 EARTHQUAKE — 1-minute alarm indicating strong shaking

2 RESPONSE — "Duck or drop, cover and hold"

3 EVACUATION — After a very strong shaking, take the safest & fastest way out

4 ASSEMBLY — Proceed to the evacuation area

5 HEAD COUNT — Check if everyone is accounted for

6 ASSESS AND ADDRESS EFFECTS — Check safety of evacuees and surroundings

7 EVALUATION OF DRILL — Provide feedback and suggestions

Damaged 3-storey building in Kananga, Leyte with first floor pressed under the second floor (pancake collapse) due to strong ground shaking.

Earthquakes happen without warning. Let's prepare our home, workplace, and community before they strike. Know the earthquake information and learn how to properly respond during and immediately after an earthquake.

1. PLAN

A. CREATE OR UPDATE THE DISASTER RISK REDUCTION AND MANAGEMENT COMMITTEE (DRRMC).

- Over-all coordinator
- Communication
- Building safety
- First aid
- Fire safety
- Site security

B. CONDUCT COMMUNITY DATA GATHERING.

- Annual population
- Map of recent community spot map
- List of persons with disabilities, elderly, children, and pregnant women.
- Determine the location of open spaces, nearest evaucation area as well as community resources.

C. CONDUCT A COMMUNITY-WATCHING EXERCISE.

- Evaluate the structural integrity of houses or buildings.
- Use the DOST-PHIVOLCS **"How Safe is My House?"** tool to determine the earthquake safety of Concrete Hollow Block (CHB) masonry houses with one or two-storey. ***(https://howsafeismyhouse.phivolcs.dost.gov.ph)***
- Identify safe and unsafe areas during earthquake within the community.

	INSIDE	OUTSIDE
GOOD & SAFE AREAS	• Ramp • Wide corridors • Visible emergency exits	• Open spaces for evacuation • Public alarm system • Wide pathways
UNSAFE AREAS	• Glass windows and panes • Shelves, machineries, appliances, and furniture	• Powerlines, posts, concrete structures, trees, bridges, overpass, or flyovers • Narrow alleys • Steep slopes or areas prone to landslide or tsunami

D. CONDUCT INVENTORY OF AVAILABLE RESOURCES AND FACILITIES THAT CAN BE USED DURING EMERGENCIES.

E. PROVIDE FOR THE NEEDS OF PERSONS WITH DISABILITIES, THE ELDERLY, CHILDREN, AND PREGNANT WOMEN.

2. DEVELOP COMMUNITY EARTHQUAKE EVACUATION PLAN

A. IDENTIFY HAZARDS PRESENT IN YOUR AREA USING THE AVAILABLE HAZARDS MAPS.

Use DOST-PHIVOLCS hazard maps
- https://hazardhunter.georisk.gov.ph
- https://gisweb.phivolcs.dost.gov.ph

B. IDENTIFY EVACUATION AREA

- Assess safety of all available open spaces for evacuation area.
- For Tsunami, identify high grounds or farther inland.
- Consider the number of occupants per house or building (daytime and nighttime), designate a specific open space for everyone.
- Determine and ensure that there is enough open space for all.

C. DEVELOP BUILDING AND COMMUNITY EVACUATION PROCEDURES.

- Identify and mark all possible emergency exits in the building and pathways going to the evacuation area.
- Set a buffer zone from the house or building.
- Identify the safest and fastest way out going to the designated evacuation area.
- Prepare an evacuation plan, including a back-up or contingency plan.

3. CONDUCT ORIENTATION ON EARTHQUAKE PREPAREDNESS AND EARTHQUAKE DRILL

A. PREPARATIONS PRIOR TO THE EARTHQUAKE DRILL

- Organize lecture about earthquake and its hazards, and how to protect one's self.

DUCK/ DROP	COVER	HOLD ON!
take cover under sturdy table or against inner walls	watch out for falling objects or debris	keep calm and don't panic

If OUTDOORS..

- Move to an open space.
- Stay away from trees, powerlines, posts, buildings, and walls.
- Move away from steep slopes and coastal areas.

- Explain the evacuation plan and the directions to the identified evacuation area. Post the evacuation map in visible places.
- Regularly check for available alerting devices such as alarm systems and sirens.
- Designate building marshals who will ensure that exit points are open immediately after the earthquake.
- Assign marshals to manage the traffic; and assist the persons with disabilities, elderly, children, and pregnant women.
- Announce the drill schedule and ensure that the community participates to the fullest extent possible.
- Assign observers and evaluators to provide feedback and suggestions during the post-drill evaluation process.
